Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            nucleic search, using sw model

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
Sequences shown in AAV41169 to AAV41181 represent antisense
CC oligonucleotides to the RNA component of human telomerase (hTR). These
CC antisense oligonucleotides specifically hybridise to a nucleotide
cc hybridise to a sequence within the template region of hTR. These
CC hybridise to a sequence within the template region of hTR. These
CC component of human telomerase in a sample. This is useful for diagnosing
CC cancer (especially neuroblastoma, bladder, colon and prostate cancer),
CC and providing prognosis for a cancer patient. The inhibitory
CC oligonucleotides can inhibit the telomerase activity level in a cell by
CC oligonucleotides can inhibit the telomerase activity level in a cell by
CC oligonucleotides can inhibit the telomerase activity assembly
CC of the RNA component into the telomerase holoenzyme, or inhibiting assembly
CC of the RNA component into the telomerase holoenzyme, or inhibiting assembly
CC objymerase activity of telomerase activity in both cultured cells and in
CC cells in vivo. They can be used in therapeutics for treating or
CC immunosuppression, and for selectively down-regulating specific branches
CC of the immune system, e.g. a specific subset of T-cells, in
CC anti-inflammatory therapies or for treating infections by, e.g. yeast,
CC anti-inflammatory therapies or for treating infections by, e.g. yeast,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

The invention relates to polynucleotide inhibitors (I) and methods for CC inhibiting telomerase activity. (I) are useful in inhibiting telomerase activity and proliferation of a telomerase positive cell, and in CC manufacturing a medicament for inhibiting telomerase activity in a cell CC adenocarcinoma of breast, prostate or colon, mixed cell leukaemia, CC adenocarcinoma of breast, prostate or colon, mixed cell leukaemia, CC disease, fertility and inflammatory conditions. (I) are also CC useful in treating a tumour or in manufacturing a medicament for the CC diseases of cettility and inflammatory conditions. (I) are also CC diseases of treatment of tumour. The polynucleotide inhibitors may also be used in CC diseases are inhibitors of telomerase activity in cells in vivo is useful in prophylactic and therapeutic conditions of treating cancer and other disorders involving inappropriate CC expression of telomerase, and in treating veterinary proliferative CC diseases. Inhibition of telomerase in haematopoletic stem cells is useful CC branches of the immune system. The present sequence represents the cCC branches of the immune system. The present sequence represents the cCC method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches

(I) are also useful in treating a tumour or in manufacturing a medicament for the treatment of tumour. The polynucleotide inhibitors may also be used in diagnostic assays for detecting RNA or DNA. Inhibition of telomerase activity in cells in vivo is useful in prophylactic and therapeutic methods of treating cancer and other disorders involving inappropriate expression of telomerase, and in treating veterinary proliferative diseases. Inhibition of telomerase in haematopoietic stem cells is useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New polynucleotide useful for inhibiting telomerase activity in cells, or for treating telomerase-mediated condition or disease, such as cancers, tumours, Hodgkin's disease, or inflammatory conditions -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to polynucleotide inhibitors (I) and methods for inhibiting telomerase activity. (I) are useful in inhibiting telomerase activity and proliferation of a telomerase positive cell, and in manufacturing a medicament for inhibiting telomerase activity in a cell
                                                                                                                                                                                                                                                                                                                                                                                                                                      AAV41177;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAV41177 standard; DNA; 15
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      for immunosuppression and for selectively down-regulating specific branches of the immune system. The present sequence represents human telomerase polynucleotide inhibitor #11, as described in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC Sequences shown in AAV41169 to AAV41181 represent antisense
CC oligonuclectides to the RNA component of human telomerase (hTR). These
CC antisense oligonuclectides specifically hybridise to a nucleotide
CC sequence within an accessible region of the hTR, but that does not
CC hybridise to a sequence within the template region of hTR. These
CC oligonuclectides may specifically be used for detection of an RNA
CC component of human telomerase in a sample. This is useful for diagnosing
CC cancer (especially neuroblastoma, bladder, colon and prostate cancer),
CC and providing prognosis for a cancer patient. The inhibitory
CC oligonuclectides can inhibit the telomerase activity level in a cell by
CC interfering with transcription of the RNA component, decreasing the
CC half-life of the telomerase RNA component transcript, inhibiting assembly
CC of the RNA component into the telomerase holoenzyme, or inhibiting the
CC plymerase activity of telomerase activity in both cultured cells and in
CC cells in vivo. They can be used in therapeutics for treating or
CC immunosuppression, and for selectively down-regulating specific branches
CC of the immune system, e.g. a specific subset of T-cells, in
CC canti-inflammatory therapies or for treating infections by, e.g. yeast,
CC canti-inflammatory therapies or for treating infections by, e.g. yeast,

The method is useful for identifying modulators of Cdc25 activity. Sequences Apf57363-376 represent intron/exon splice junction sequences of the murine Cdc25A gene.
                              Sequences shown in ANV41169 to ANV41181 represent antisense oligonucleotides to the RNA component of human telomerase (hTR). These antisense oligonucleotides specifically hybridise to a nucleotide sequence within an accessible region of the hTR, but that does not hybridise to a sequence within the template region of hTR. These oligonucleotides may specifically be used for detection of an RNA component of human telomerase in a sample. This is useful for diagnosing cancer (especially neuroblastoma, bladder, colon and prostate cancer), and providing prognosis for a cancer patient. The inhibitory
and providing prognosis for a car
pligonucleotides can inhibit the
                                                                                                                                                                                                                                                                                                                                                Claim 11; Page 65; 80pp;
                                                                                                                                                                                                                                                                                                                                                                                                       New polynucleotide(s) anti:sense to human telomerase - used detecting or inhibiting human telomerase, e.g. for treating contraception, immuno-suppression or treating infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  20-DEC-1996;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      interfering with transcription of the RNA component, decreasing the half-life of the telomerase RNA component transcript, inhibiting assemble of the RNA component into the telomerase holoenzyme, or inhibiting the polymerase activity of telomerase. These antisense oligonucleotides can be used for inhibiting telomerase activity in both cultured cells and in cells in vivo. They can be used in therapeutics for treating or preventing cancer, for contraception or sterilisation, for immunosuppression, and for selectively down-regulating specific branches of the immune system, e.g. a specific subset of T-cells, in anti-inflammatory therapies or for treating infections by, e.g. yeast,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           European; infectious Salmon anaemia; virus; ISAV; nucleoprotein; vaccine; polymerase chain reaction; PCR; 88.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ISA3
                                                                            The sequences given in AAH43407-21 are primers which were used in the amplification and cloning of the cDNA encoding the european infectious Salmon anaemia (ISA) antigen polypeptide. The antigen is cloned from RNA segment 3 of ISA virus (ISAV) and is believed to be a major cell culture antigen of the virus, which may be a nucleoprotein. The ISA antigen, or a fragment of it, may be used to vaccinate fish against ISAV infection. It may also be used to screen fish for ISA
                                                                                                                                                                                                                                                                                                                                                       Vaccinating fish against using European ISA virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  08-MAR-2000; 2000GB-0005457

                                                                                                                                     Matches
                                                                                                                                                                                                                          The inventors describe the production of mammalian cells expressing prohormone convertase which facilitates the processing of prohormone precursors to active hormones. More specifically the cleavage site is the prohormone convertase cleavage site given in AAR37633-35. In order to define murine prohormone convertase 1 specifically prorelaxin alanine mutations of the basic residues K and R were constructed. The following mutations were tested for substrate specificity to murine prohomone convertase: 1.4, 2.4, 3.2, 4.3,
                                                                                                                                                                                                                   specificity 7.2 and 8.6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CDS

                                                                                                                                                                                                                                                                                                                                                              The inventors describe the production of mammalian cells expressing prohormone convertase which facilitates the processing of prohormone precursors to active hormones. More specifically the cleavage site is the prohormone convertase cleavage site given in ARR37632-35. In order to define murine prohormone convertase 1 specifically prorelaxin alanine mutations of the basic residues K and R were constructed. The following mutations were tested for substrate specificity to murine prohomone convertase: 1.4, 2.4, 3.2, 4.3, 7.2 and 8.6 (see AAQ43256-63; AAR37619-26).

The mutant sites have replacements of either residues with an Ala. This confers specificity to murine PCl. In this particular mutant, the Lys residue such that Relaxin is an ovarian hormonal peptide responsible for remodelling the reproductive tract prior to parturition. The cells containing both the prohormone convertase gene and the required precursor to be expressed can be injected into a mammal.

The invention relates to methods for biological production of para-
CC hydroxycinnamic acid (PRGA). The invention relates to developing of a new
CC biocatelyst for conversion of glucose to PHCA by incorporation of the
CC wildtype phenylalanine ammonia lyase (PAL) EC 4.3.1.5) from the yeast
Rhodotorula glutinis into Bscherichia coli underlying the ability of the
CC wildtype PAL to convert tyrosine to PHCA. The invention is also directed
CC unidtype PAL to convert tyrosine to PHCA. The invention is also directed
CC incorporation of the wildtype PAL which possesses enhanced tyrosine
CC incorporation of the wildtype PAL which possesses enhanced tyrosine
CC plant cytochrome p-450 and the cytochrome p-450 reductase into E. coli.
CC Nucleic acid encoding mutant TAL enzyme is useful for producing PHCA by
CC recombinant techniques. The recombinantly produced PHCA may be used as a
CC in elsetronic connectors and telecommunication and aerospace
CC in elsetronic connectors and telecommunication and aerospace
CC applications. LCP resistance to sterilising radiation has also enabled
CC these materials to be used in medical devices as well as chemical, and
CC cod packaging applications. The present sequence is a PCR primer used
CC to amplify PAL gene.

The method is useful for the biological production of PHCR which is useful as a monomer for the production of Liquid Crystal Polymers (LCP), where the LCP is used in electronic connectors, teleccommunications and aerospace applications. LCP is also useful in medical devices, as well as chemical, and food packing applications due to its resistance to sterilising radiation. The present sequence is a PCR primer used for amplifying red yeast
                                                                                                                                               DNA from intergenic region of banana bunchy top virus DNA component - useful for promoting, enhancing, regulating or modifying transcription of a non-BBTV gene in transgenic plants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 22

                                                                                                         The present invention relates to a method for cloning a gene. The method comprises employing a replication-deficient baculovirus vector and a rescue vector, and causing the vectors to recombine to produce a replication-enabled baculovirus vector having at least one gene to be cloned. The present sequence is an oligonucleotide used in the present invention. The method of the present invention is especially useful for expressing thousands of genes in alternative hosts (e.g. insect cells) derive sufficient material for determining protein function.
                                                                                                                                                                                                                                  Method for cloning a gene, especially useful for expressing thousands of genes in alternative hosts, comprises employing a replication-deficient baculovirus vector and a rescue vector and causing the vectors to recombine

A method for detecting cancer comprises: (a) removing the cellular portion of a body fluid specimen from the patient; (b) preparing a protein extract from the body fluid remainder; (c) assaying the extract for the presence and quantity of telomerase RNA or telomerase activity; and (d) comparing the results with normal levels, to determine the presence of cancer. The methods are used in cancer diagnosis and prognosis, and also to monitor cancer therapy effectiveness. Unlike prior art telomerase activity assays in cancer patients, the method allows noninvasive sample collection. The methods are also more reliable and less tumour specific than other methods which detect circulating tumour markers. The present sequence represents a human telomerase RNA template PCR primer used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 25 BP; 7 A; 3 C; 9 G; 6 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Detecting telomerase activity in non-cellular body fluid using modified telomeric repeat amplification protocol
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 1999-508655/42.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

FILING DATE:
CLASSIFICATION: 435
ATTORNEY/AGENT INFORMATION:
NAME: PAUL, Thomas D.
REGISTRATION UNMER: 32,714
REFERENCE/DOCKET NUMBER: D-5900
TELECOMMUNICATION INFORMATION:
TELEPHONE: 713/651-5325
INFORMATION FOR SEQ ID NO: 86:
SEQUENCE CHARACTERISTICS:
LENGTH: 8 base pairs
TYPE: nucleic acid
STRANDEDNESS: single
TOPOLOGY: linear
MOLECULE TYPE: other nucleic acid
DESCRIPTION: /desc = "oligonucleotide"
HYPOTHETICAL: YES
